

Problem Statement No. 18

AI Grant and Funding Finder for Startups

Challenge

Startups often struggle to identify suitable government grants because funding opportunities are spread across multiple platforms, lengthy guidelines, and unstructured documents. Understanding eligibility criteria, funding details, application deadlines, and submission requirements requires significant manual effort and domain knowledge. This makes the funding discovery process slow, complex, and error-prone.

Proposed Solution

GrantAI is an AI-powered platform that simplifies the grant application journey for startups using **IBM Granite**, **IBM watsonx.ai**, **Retrieval-Augmented Generation (RAG)**, and a **multi-agent architecture**. The platform recommends relevant government grants, evaluates eligibility, generates proposal drafts, analyzes deadlines, and provides intelligent funding guidance based only on official government grant documents.

Key Technologies

- IBM Granite
- IBM watsonx.ai
- FastAPI
- React
- Retrieval-Augmented Generation (RAG)
- FAISS Vector Database
- Multi-Agent AI Workflow

Expected Impact

GrantAI reduces the time and effort required to discover funding opportunities while improving transparency, accessibility, and decision-making for Indian startups seeking government grants.
